                                                                                                                                                                                                                                                                                                                                                                                      Sequence 24. Application US/09795798

Patent No. 6703018

GENERAL INFORMATION:

TITLE OF INVENTION: Humanized Anti-CD11a Antibodies
NUMBER OF SEQUENCES: 24
CORRESPONDENCE ADDRESS:

ADDRESSER: Genentech, Inc.
STREET: 1DNA WAY
CITY: South San Francisco
STATE: California
COUNTRY: USA
ZIP: 94080

COMPUTER READABLE FORM:
MEDIUM TYPER: 3.5 inch, 1.44 Mb floppy disk
COMPUTER: WinPatin (Genentech)
COMPUTER: CALON (WINBER: 08/974,899
FILING DATE: CALON (WINBER: PROCK)

New humanised anti-CD11a antibody - used in immunoassays for CD11a, and also to treat conditions such as immunological or inflammatory disease.

humanised anti-CD1a antibody that binds specifically to the human CD1a I domain (WHM24 epitope). CD1a refers to the alpha subunit of lymphocyte function-associated antigen 1 (LFA-1) from any mammal. The humanised anti-CD11a antibodies are used to determine presence of CD11a in usual immunoassays or by in vivo imaging, particularly for diagnosis of CD11a associated diseases (typically immune responses and inflammation such as poriasis, Crohn's disease, rheumatoid arthritis, transplant rejection, leukaemia, etc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents the heavy chain variable domain of a mutant mutine antibody WHM24 of the invention. The mutants are of a species-dependent antibody (Ab), and have an amino acid substitution in a variable region of the Ab, and binding affinity for an antigen (Ag) from a non-human mammal at least 10 times stronger than for the wild type Ab against the Ag. The mutant antibodies are particularly intended for administration to a non-human mammal in preclinical studies (e.g. of infection, immunity, haematopodesis or transplantation). They can also be used diagnostically (to identify specific proteins) or therapeutically, e.g. where directed against CDIa (lymphocyte function-associated antigen.)) or intercellular adhesion molecule-1 against a wide variety of inflammatory or autoimmune diseases, malignancies, transplant rejection, human immune deficiency virus infection and tumour cell invasion.

Conversion to the mutant form allows useful antibodies to be produced

The Ab has anti-inflammatory, immunosuppressant, antitumour and antiviral activities. The Ab blocks lymphocyte function—associated antiquen (LFA-1) which is involved in leucocyte adhesion associated with inflammatory and immunological responses. The Ab are used: (i) optionally when coupled to a cytotoxin, to treat or prevent disorders mediated by lymphocyte function—associated antigen. (LFA-1; CD1a/CD18), e.g. psoriasis, inflammatory bowel disease, eczema, systemic lupus erythematosus, thintis, leukaemia, viral infections and many others, also for timhibiting graft rejection; (ii) when labeled, to detect CD1a; (iii) for tumour pretreatment; (iv) for delivery of enzymes that convert prodrugs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      e.

                                                                                                                                                                                                                                                                                                            9
to active anticancer agent, and (v) for affinity chromatography. The Abretain about the same activity in adheaion and mixed lymphocyte response assays as the murine antibodies from which they are derived. The murine anti-CD11a antibody MHMZ4 has IC50 0.09 mM for preventing adheaion between Jurkat cells (expressing LFA-1) and normal epidermal keratinocytes that express ICAM-1 (intracellular adhesion molecule-1). The fully humanized version of MHMZ4 had IC50 0.13 nM. The present sequence represents the amino acid sequence of a rhesusised antibody mutant heavy chain, which is used in the exemplification of the present

(CD) 11a antibody having specificity to human CD11a 1-domain or CD11a with a kd value of not more than 1x10-8 M, or concentration for 50 f inhibition (ICSO) (nM) value of not more than 1 nM in mixed lymphocyte response assay or for preventing addression of Jurkat cells to normal human cupidermal keratinocytes expressing intercellular adhesion molecule (ICAM) -1. Also included area kit comprising the antibody and instructions for use to detect the CD11a protein, an isolated nucleic acid encoding the antibody, a vector comprising the nucleic acid, a host cell comprising the vector and producing the antibody by culturing the cell so that the antibody is expressed. The antibody binds to epitope MHM24 on CD11a. The antibody is useful for determining the presence of CD1a protein and for treating lymphocyte function-associated antigen | mediated disorder such as psoriasis, Crohn's disease, ulcerative colitis, dermatitis, sathma, creating arthritis, systemic lupus erythematosus, multiple sclerosis and diabetes mallitus. The antibody is useful when conjugated to a condidabetes multipody so a sathma, creating enzyme, or as an affinity purification agent. The present sequence is the light chain of a rhesusised ant-CD11a antibody of

                                                                                                                                                                                                                                                                                 The present interaction retactes to an autonouy micention is a special dependent antibody with beneficial properties. The invention is useful for treating and preventing infectious diseases such as human immunosity in thinovitus infections, infilammatory skin disease such as paoriasis, inflammatory bowel diseases such as Crohn's disease such as paoriasis, inflammatory bowel diseases such as Crohn's allergic diseases such as exceed and asthma, autofmnume diseases such as the municipal diseases such as profits, systemic lupus erythmatosus (SLB), diabetes cuberculosis, sarcoidosis, polymyositis and chronic obstructive pulmonary disorders such as poison ivy and poison oak, B-cell malignancies such as chronic lymphocytic leukaemia and hairy cell leukaemia, graft versus host disease and cancer. The invention is also useful in gene therapy. The present sequence is rhesualsed murine anti-human CDla monoclonal.

The present sequence represents the heavy chain variable region of a humanised anti-CDI1a antibody that binds specifically to the human CDI1a I domain (MHM24 epitope). CDI1a refers to the alpha subunit of lymphocyte function-associated antigen I (LPA-1) from any mammal. The humanised anti-CDI1a antibodies are used to determine presence of CDI1a in usual associated by in vivo imaging, particularly for diagnosis of CDI1a associated diseases (typically immune responses and inflammation such as portasis, Crohn's disease, rheumatoid arthritis, transplant rejection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 NOKFKDRFTISVDKSKNTLYLOMNSLRAEDTAVYYCARGIYFYGTTYFDYWGQGTLVTVS 120

and was used to produce a mutant of the invention. The mutants are of a species-dependent antibody (Ab), and have an amino acid substitution in a variable region of the Ab, and binding affinity for an antigen (Ag) from a non-human mammal at least 10 times stronger than for the wild type Ab against the Ag. The mutant antibodies are particularly intended for administration to a non-human mammal in preclinical studies (e.g. of infection, immunity, haematopolesis or transplantation). They can also be used diagnostically (to identify specific proteins) or therapeutically, e.g. where directed against CDIIa (Iymphocyte function-associated antigen 1) or intercellular adhesion molecule-1 against a wide variety of inflammatory or autoimmune diseases, malignancies, transplant rejection, human immune deficiency wirus infection and tumour cell invasion. Conversion to the mutant form allows useful antibodies to be produced from antibodies which normally have affinity for non-human analogues of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 NQKFKDRPTISVDKSKNTLYLQMNSLRABDTAVYYCARGIYFYGTTYFDYWGQGTLVTVS 120

The present invention describes a humanised anti-CD11a antibody (Ab) that binds specifically to the human CD11a I-domain. The Ab has anti-inflammatory, immunosupressant, antitumour and antiviral activities. The Ab blocks lymphocyte function-associated with inflammatory and involved in leucocyte adhesion associated with inflammatory and immunological responses. The Ab are used: (1) optionally when coupled to a cytotoxin, to treat or prevent disorders mediated by lymphocyte function-associated antigen-I (LFA-1; CD11a) (-9. psoriasis, inflammatory bowel disease, eczema, systemic lupus erythematosus, inhibiting graft rejection; (ii) when labeled, to detect CD11a; (iii) for inhibiting graft rejection; (ii) when labeled, to detect CD11a; (iii) for tumour pretreatment; (iv) for delivery of enzymes that convert prodrugs to active anticancer agent; and (v) for affinity chromatography. The Ab cream activity in adhesion and mixed lymphocyte response assays as the murine antibodies from which they are derived. The murine anti-CD11a antibody MHM24 has IC50 0.09 nM for preventing adhesion between Jurkat cells (expressing LFA-1) and normal epidermal charter antibody when the tracellular adhesion molecule-I). The fully humanized version of MHM-1 (intracellular adhesion molecule-I). The fully humanized version of MHM-1 (anticacllular adhesion molecule-I).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mouse; CD11a; I-domain; monoclonal antibody; heavy chain variable region; VH; cluster of differentiation 11a; mixed lymphocyte response assay; Jurkat cell; epidermal keratinocyte; intercellular adheaion molecule; ICAM-1; lymphocyte function-associated antigen 1 mediated disorder; psoriasis; Crohn's disease; ulcerative colitis; dermatitis; asthma; rheumatoid arthritis; systemic lupus erythematosus; multiple sclerosis; diabetes mellitus; prodrug activating enzyme; humanised.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120

C(D) lia antibody having specificity to human CD11a I-domain or CD11a with a kd value of not more than 1x10-8 M, or concentration for 50 % inhibition (ICSO) (IM) value of not more than 1 mM in mixed lymphocyte response assay or for preventing adhesion of Jurkat cells to normal human epidermal keratinocytes expressing intercellular adhesion molecule (ICAM) of the following the antibody and instructions for use to detect the CD11a protein, an isolated mucleic acid encoding the antibody, a vector comprising the nucleic acid, a host cell comprising cantibody, a vector comprising the nucleic acid, a host cell comprising cantibody is expressed. The antibody by culturing the cell so that the antibody binds to epitope MHM24 on CD11a. The antibody is expressed. The antibody binds to epitope MHM24 on CD11a. The antibody is aspected antibody by culturing the presence of CD11a protein and for treating lymphocyte function-associated antigen 1 mediated disorder such as psoriasis, Crohn's alsesse, ulcerative colitis, dermatitis, asthma, cheumatoid arthritis, systemic luque erythematoeus, multiple sclerosis and diabetes mellitus. The antibody is useful when conjugated to a prodrug activating enzyme, or as an affinity purification agent. The mouse anti-CD11a I domain monoclonal antibody MHM24.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 NQKFKDRFTISVDKSKAYLLYLOMNSLRAEDTAVYYCARGIYFYGTTYFDYWGQGTLVTVS 120

The present invention relates to an antibody mutant of a species—
dependent antibody with beneficial properties. The invention is useful
for treating and preventing infectious diseases such as human
immunodeficiency virus (HIV) and rihinovirus infections, inflammatory skin
disease such as psoriasis, inflammatory bowel diseases such as Crohn's
disease and ulcrative colitis, adult respiratory distress syndrome,
allergic diseases such as eczema and asthma, autoimmune diseases such as
rheumatoid arthritis, systemic lupus erythematosus (SLB), diabetes
rheumatoid arthritis, polymyositis and chronic obstructive pulmonary
disease (COPD), CNS inflammatory disorder, skin hypersensitivity
disorders such as poison ivy and poison oak, B-cell malignancies such as
chronic lymphocytic leuksemia and hairy cell leukaemia, graft versus host
disease and cancer. The invention is also useful in gene therapy. The
present sequence is humanised murine anti-human CDlia monoclonal antibody
                                     rhinovirus infection; inflammatory skin disease; psoriasis; inflammatory bowel disease; Crohn's disease; ulcerative colitis; adult respiratory distrass syndrome; allergic disease; eczema; asthma; autolummune disease; rheumatoid arthritis; systemic lupus erythematosus; SiB; diabetes mellitus; Reynaud's syndrome; immunological disease; tuberculosis; sarcoidosis; polymyositis; chronic obstructive pulmonary disease; COPD; CNS inflammatory disorder; skin hypersensitivity disorder; polson ivy; poison oak; slaidynancy, chronic lymphocytic leukaemia; hairy cell leukaemia; graft versus host disease; cancer; gene therapy; murine anti-human CDIIa monoclonal antibody; MHM24; variable heavy chain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 NQKFKORFIISVDKSKONILYLQMNSLRAEDTAVYYCARGIYFYGTTYFDYWGQGTLVTVS 120

Its bioactivity and the expression in host cell are greatly increased. The DNA molecule for coding the antibody, its preparation process and the medicinal composition containing it are also disclosed. The present sequence represnts a heavy chain variable region of human CD11a.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 BVQLVESGGGLVQPGGSLRLSCAASGYSFTGHWNNWVRQAPGKGLEWVGMIHPSDSETRY

The invention relates to a method of purifying a protein which comprises C a CH2/CH3 region by protein A affinity chromatography. The method involves reducing the temperature of a composition comprising the protein and one or more impurities subjected to protein A affinity chromatography c to 3-20 degrees Celsius, where protein A leaching is reduced. Preferably the protein is antibody. The antibody is selected from Trastuzumab, chmanized 2C4, humanized CD11a antibody, and humanized VEGF antibody. Preferably, the antibody binds HRZ antigen, where the antibody is C Trastuzumab or humanized 2C4. The protein is an immunoadhesin, C Trastuzumab or humanized 2C4. The protein is an immunoadhesin, and specifically a TNF receptor immunoadhesin. The methods are useful for specifically a TNF receptor immunoadhesin. The methods are useful for affinity chromatography and for reducing leaching of protein A during c protein A affinity chromatography. The current sequence represents the coverable heavy chain amino acid sequence of CD11a.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 NOKEKDRFTISVDKSKNTLYLOMNSLRAEDTAVYYCARGIYFYGTTYFDYWGQGTLVTVS 120

fusion protein. Homo sapiens.

```
The invention relates to a method for purifying a target protein from a mixture containing a host cell protein. This method comprises subjecting the mixture to a non-affinity purification followed by high-performance tangential flow filtration (HPTPP) and isolating the protein in a purity containing less than 100 parts/million (ppm) of the host cell protein, where the method of the invention includes no affinity purification, process. The method of the invention is useful for purifying a target protein from a mixture containing a host cell protein, and is useful for incorporating the isolated protein into a pharmaceutical formulation. Proteins purified using the method of the invention are useful in a pharmaceutical respect, and are also useful in various diagnostic and therepeutic purposes. The method of the invention is efficient in the argument protein from a mixture containing a host cell protein, and may also be effectively performed at low cost. The current sequence. This represents the anti-CDIIa rhuMAb heavy chain amino acid sequence. This

antibody fragments covalently attached to one or more nonprotestinated polymer molecules, where the apparent size of the conjugate is at least about 500 kba. Conjugates of antibody fragments which bind the human interleukin (IL) 8 with a nomprotestinaceous polymer can be used for treating inflammatory disorders e.g. acute lung injury, ischaemic reperfusion disorder, and autoimmune diseases. They can also be used for treating e.g. inflammatory skin diseases including psoriasis and atopic dermatitis, systemic scleroderm and sclerosis, and asthmatic diseases. The conjugates can also be used as reagents in an animal model system for in vivo study of the biological functions of the antigen recognised by the conjugate. The present sequence represent the human IgG1 subgroup III heavy chain variable domain form the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Interleukin-8; IL-8; monoclonal antibody; MAb; anti-IL-8; 6G4.2.5V11N35A; inflammatory disorder; adult respiratory distress syndrome; chimeric; affinity purification; 6G4.2.5.
                                                                                                                                                                                                                                                                                                                                                           conjugates of nonproteinaceous polymers with antibody fragments, used treating inflammatory disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 BVQLVESGGGLVQPGGSLRLSCAASGFSFTGHWMWWVRQAPGKGLEWVGMIHPSDSETRY 60

Gonzalez TN;

The invention relates to an anti-interleukin-8 (IL-8) monoclonal antibody (MAb). The anti-IL-8 MAb comprises a sequence containing the CDRs (complementarity determining regions) of the humanized anti-IL-8 (G4.2.5V1N35A light chain; and amino acids 24-253 of the humanized anti-IL-8 (G4.2.5V1N35A heavy chain. The anti-IL-8 MAbs and fragments can be used in diagnosis, for affinity purification of IL-8 from recombinant cell culture or natural sources and for the treatment of inflammatory disorders e.g. adult respiratory distress syndrome. Nucleic acids encoding the anti-IL-8 MAb can be associated in a vector with another gene encoding another protein or protein fragment to produce a fusion protein which can make isolation and/or purification of the protein an New nucleic acid molecule encodes a polypeptide which is an anti-interleukin-8 monoclonal antibody or antibody fragment useful for the production of anti-interleukin-8 monoclonal antibodies or fragments. Example, Fig 29, 188pp, English.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Natl. Acad. Sci. U.S.A. 76:2890-2894(1979).

-I-MISCELLANEOUS: This chain was isolated from an IGA myeloma protein that binds galactan.
            C -1 - FUNCTION: Beca-2-microglobulin is the beta-chain of major histocompatibility complex class I molecules (By similarity).

-1 - SUBCELLULAR LOCATION: Secreted (By similarity).

Solin M.L., Kaartinen M.;

"Allelic polymorphism of mouse Igh-J locus, which encodes immunoglobulin heavy chain joining (JH) segments.";

Immunogenetics 36:306-313(1992).

-I MISCELLANEOUS: This chain was isolated from an IgA myeloma protein that binds galactan.

-I SIMILARITY: Contains 1 Ig-like (immunoglobulin-like) domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 24,
